Leukopak, MNC apheresis, non-mobilized
For clinical or research use
Bio-Sharing.org

Product Description
Peripheral Blood Mononuclear Cell (PBMC) apheresis products, often called “Leukopaks” are collected from healthy, non-mobilized donors using automated apheresis. ACD anticoagulant is used at a ratio of 1:13. These products are enriched sources of monocytes and lymphocytes. They also contain platelets, plasma, and red cells. Products are shipped in liquid format or frozen, if requested. Product volume and cell count will vary depending on requested customized parameters.

Product Storage
If product is cryopreserved, store at -80⁰C or colder until use. Use immediately upon thaw. If product is liquid, use immediately or store at 4⁰C for up to 24 hours.

Recommended Thawing Procedure for Cryopreserved MNC Leukopak Products (research use)

Materials
37⁰C water bath
ziplock bag, bigger than cryobag
70% Isopropyl alcohol
Kim wipes
Syringe
18G needle
PBS w/o Ca²⁺/Mg²⁺
Human Serum Albumin (or Bovine Serum Albumin)
EDTA

Protocol
Cells inside Leukopak products are sterile. To maintain sterility, perform all harvesting steps inside a biological safety cabinet, practice sterile technique, and use only sterile supplies and media.

1. Make up washing buffer, equal to the volume of the product
   a. PBS
   b. 0.5% HSA (or BSA)
   c. 2mM EDTA
2. Remove cryopreserved product from storage and place into ziplock bag and seal. Place bag into water bath and gently rotate for 2-3 minutes until there are only a small amount of ice crystals left.
3. Take cryobag to the biological safety cabinet. Spray bag with 70% alcohol and wipe with a Kim wipe.
4. Draw up wash buffer into syringe. VERY slowly inject buffer into the bag with gentle bag rotation—this should take 5-10 minutes to complete
5. Remove a sample for counting and proceed to downstream research applications.

Warning
This product is composed of human-derived materials. Always wear appropriate personal protective equipment when handling this product and treat it as potentially infectious, using Universal Precautions, regardless of the results of infectious disease testing.

Limitations and Publications
This product is for research use or therapeutic use only, not for resale. Nothing produced directly from this product may be sold. When publishing scientific results obtained using this product, acknowledge supplier as Bio-Sharing.org.
